

ABSTRACT OF THE DISCLOSURE

A filter head assembly is configured for connection to a water line and including at least two filter heads connected to each other for treating water supplied through the water supply line and at least one of the filter heads accommodating a replaceable filter bowl. The assembly includes at least one head housing having an inlet port, an outlet port, a central chamber in fluid communication with the ports and a bowl connection opening in fluid communication with the chamber. Each of the ports is pivotally connected to one of a tubular connector and an end plug fitting so that the head housing can pivot relative to the respective connector and/or fitting.
